**Making Your Art More  
Sustainable**

# What is climate change? What is pollution?

The climate is changing because of what humans are doing to the planet

When we waste things or use toxic chemicals, this creates pollution which harms the planet

We need to stop this and look after our planet instead!

# How to make our artwork more **sustainable**

Think about:

- What materials are you using?

- Where do the materials come from?

- What will happen after the materials have been used?

- Can they be recycled?

- Are they **biodegradable** or toxic?

- Could you make artwork that raises **awareness** around climate issues?

- Could you use an eco-friendly **process**?  
Here are some examples of eco-friendly processes:

Paper making

Making natural  
dyes, paints  
and inks

## Weaving with natural or recycled materials

## Collaging with old magazines

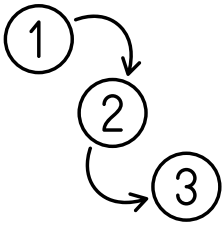

# Definitions

**Awareness:** understanding

**Biodegradable:** something that breaks down naturally (for example food or plants)

**Process:** A way of doing something

**Sustainable:** eco friendly
